Professional Summary

Technology professional with approximately 30 years of experience spanning software engineering, solution architecture, technical consulting, and product and project management. Skilled at translating customer business and technical requirements into actionable designs and leading delivery from PoCs and MVPs through production operations and global rollout. Recent work includes leading the delivery of AI learning platforms, automated short-form video generation, medical intake services, and an AI tutor for maritime professionals, supported by expertise in LLM-based service design, RAG, embeddings, and vector search. Combines hands-on Python and Java development experience with AWS and Azure integration expertise to resolve customer challenges and bridge customer needs with engineering execution.

Core Competencies

- **Customer Discovery & End-to-End Delivery:** Business and technical requirements analysis; scope, schedule, and risk management; delivery from PoCs and MVPs through production operations
- **AI Product Design & Engineering:** LLM-based service planning, architecture design, and implementation using RAG, embeddings, and vector search
- **Solution Architecture & Systems Integration:** Application, API, backend, and data model design; AWS and Azure integration; legacy modernization
- **Prototyping & Technical Problem-Solving:** Python and Java prototyping and backend development; root cause analysis, troubleshooting, and software quality assurance through testing
- **Technical Consulting & Global Rollout:** Customer system assessments, improvement strategies, solution adoption, international deployment, and technical enablement for customers and engineering teams
